1. Introduction
2. Stages of the HRA process for plans
3. European Sites for Consideration
4. Screening for potential effects on a European Protected Site
5. Appropriate Assessment & Mitigation
6. Summary of HRA Conclusions

Appendices

- Appendix 1 – Policy Screening
- Appendix 2 – Site Screening
- Appendix 3 – SPA/SAC maps and development sites
- Appendix 4 – Further information on SPA/SACs

1. Introduction

- 1.1 Following a ruling by the European Court of Justice (ECJ) in October 2005, plans which are likely to have a significant effect on Special Protection Areas (SPAs) or Special Areas of Conservation (SACs) (referred to collectively as European sites) can be approved only after an Appropriate Assessment of the implications of the policies or proposals on the sites has been carried out, under the provisions of Article 6(3) and (4) of the Habitats Directive 1992. The requirements are transposed into domestic law, in this context, primarily by Regulations 85A to E of the *Conservation (Natural Habitats, & c.) Regulations 1994 as amended (the 'Habitats Regulations')*. Scottish Ministers have also extended the requirement for assessment to Ramsar sites, listed under the International Convention on the Conservation of Wetlands of International Importance, and potential SPAs (pSPAs) and candidate SACs (cSACs), before they are fully classified. The Scottish Government conveyed the outcome of this ruling to local authorities in December 2005 and in May 2006 issued interim guidance - 'Assessing Development Plans in Terms of the Need for Appropriate Assessment'.
- 1.2 The *North Lanarkshire Local Development Plan (NLLDP)* requires to be assessed in relation to the requirements of the Habitats Directive.
- 1.3 The Habitats Regulations Appraisal looks at the policies and proposals of the Local Development Plan to see if these are likely to have a significant effect on a European site. If so an Appropriate Assessment of these elements is required to see if it can be ascertained that they will not adversely affect the integrity of a European site.
- 1.4 A first draft HRA was produced for the NLLDP Proposed Plan 2017 and consultation undertaken with NatureScot. The HRA was re-drafted to take into account changes from the Proposed Plan to the Modified Proposed Plan, as well as taking on board comments received from NatureScot at Proposed Plan stage and then again following consultation of the Modified Proposed Plan. Final amendments have now been made following Examination of the NLLDP.

2. Stages of the HRA process for plans

- 2.1 NatureScot's guidance sets out a series of (potentially) thirteen HRA stages for plans. It should be demonstrated in a systematic manner how the plan making body has identified, if any, elements of the plan are likely to have significant effect on European sites, and, if so, how it can be

concluded that there would be no adverse effects of the integrity of European sites. The key stages of the HRA process are outlined below.

Stage 1

Decide whether the Plan is subject to Habitat Regulations Appraisal

Stage 2

Identify European sites that should be considered in the appraisal

Stage 3

Gather information about the European sites

Stage 4

Discretionary consultation on the method and scope of the appraisal

Stage 5

Screen Plan for likely significant effects on a European site

Stage 6

If significant effects likely – undertake an appropriate assessment in view of conservation objectives

Stage 7

Amending the Plan until there is no adverse effect on site integrity

Stage 8

Prepare draft record of HRA

Stage 9

Consult on draft HRA record

Stage 10

Screen any amendments for likelihood of significant effects. Carry out appropriate assessment and re-consult if necessary

Stage 11

Modify HRA record in light of representations and any amendments to the Plan and complete and publish final/revised HRA record

- 2.2 **Stage 1** of the process is to decide whether the plan is subject to HRA. The appraisal of the effects of land use plans on European sites is required by regulation 85A of part IVA of the Conservation (Natural Habitats, & c.) Regulations 1994 as amended. A Habitats Regulations Appraisal has therefore been carried out for the *North Lanarkshire Local Development Plan*.

3. European Sites for Consideration

- 3.1 **Stages 2 and 3** identifies the relevant European sites and information about these sites. European sites to be considered through the appraisal and obtained through consultation with NatureScot has identified that the North Lanarkshire Local Development Plan area contains one Special Protection Area (SPA) and four Special Areas of Conservation (SACs). Further information on each European Site is outlined in Appendix 4, the locations of these sites and the qualifying interests are as follows:

3.2 Special Protection Areas:

Slamannan Plateau SPA

Qualifying interests

- Slamannan Plateau qualifies under Article 4.2 by regularly supporting nationally important numbers of migratory Taiga bean geese (*Anser fabalis fabalis*).

3.3 Special Areas of Conservation:

Black Loch Moss SAC

Qualifying interests

- Active raised bogs
- Degraded raised bogs still capable of natural regeneration

North Shotts SAC

Qualifying interests

- Active raised bogs
- Degraded raised bogs still capable of natural regeneration

Clyde Valley Woods SAC

Qualifying interests

- *Tilio-Acerion* forests of slopes, screes and ravines (Mixed woodland on base-rich soils associated with rocky slopes)

West Fannyside Moss SAC

Qualifying interests

- Blanket bog

3.4 Relevant European Protected Sites in adjacent Local Authority Areas

Blawhorn Moss SAC (West Lothian)

Qualifying interests

- Active raised bogs
- Degraded raised bogs still capable of natural regeneration

Blawhorn Moss SAC is located adjacent to the North Lanarkshire Council boundary. While no sites within North Lanarkshire have been identified as having any likely significant effect on the Blawhorn Moss SAC, should circumstances change, any future modifications to the Plan should take regard of the qualifying interests of the SAC where applicable.

3.5 Ramsar Sites:

There are no Ramsar sites in North Lanarkshire.

- 3.6 Map 1 below shows the locations of the European Sites within North Lanarkshire.

- 3.7 **Stage 4** - Sites submitted during the 2013 Call for Sites and 2015 Main Issues Report (MIR) were consulted upon, along with the 2016 MIR Report on Responses and Site Selections. Consultation was also carried out through the Strategic Environmental Assessment process. A number of sites were identified by NatureScot as having a likely significant effect on European sites at the Call for Sites and MIR stages, however none of these sites were carried through to the Proposed Plan or Modified Proposed Plan stages.

- 3.8 Subsequent consultation was undertaken following the publication of the NLLDP Proposed Plan. At this stage, NatureScot further commented on two sites within North Lanarkshire which could have a likely significant effect on the Slamannan Plateau SPA. These sites are located within the

South Cumbernauld Community Growth Area (NLCN0490A Palacerigg and NLCN0490B Mid-Forest) and later addressed within this HRA. Following publication of the NLLDP Modified Proposed Plan, NatureScot further highlighted site NLC00519 Proposed Energy Plant Greengairs Road as a likely significant effect on the Slamannan Plateau SPA. 2C Visitor Economy Areas & Locations - PP2C Purpose of Place Policy was also identified as having the possibility, depending on how it is implemented, to have a significant effect on the Slamannan Plateau SPA or West Fannyside Moss SAC.

Appendix 3 is a set of maps showing the five SPA/SAC areas and surrounding development sites. A 1km buffer around the SPA/SACs is shown only for an indication of the location of sites in relation to the European Sites.

4. Screening for potential effects on a European Protected Site

4.1 Screening (**stage 5**) has been undertaken of the policies and proposed sites in the *North Lanarkshire Local Development Plan*.

4.2 The purpose of this stage is to:

- identify all aspects of the proposed plan where it is certain that they would have no significant effect alone or in-combination on a European site that would lead to their elimination from further consideration,
- identify all aspects of the plan which would not be likely to have a significant effect on a European site, but would be likely to have some minor residual effect and,
- identify those aspects of the plan where it is not possible to rule out risk of significant effect on a European site either alone or in combination, and as a result provide a clear scope for the parts of the plan that will require appropriate assessment.

A 'likely effect' is one that cannot be ruled out, while a 'significant effect' is one that could undermine a site's conservation objectives.

A three step screening process is outlined in the guidance and has been followed to screen the *NLLDP*:

Step 1: screening out general policy statements;

Step 2: screening out projects referred to in, but not proposed by, the plan;

Step 3: screening out aspects of a plan that could have no likely significant effect.

Policies and proposals screened out at step 3 have been so for a number of different reasons, categorised as follows:

3a: Aspects which protect the natural environment, including biodiversity, or conserve or enhance the natural, built or historic environment;

3b: Aspects that will not lead to development or other change;

3c: Aspects which make provision for change but could have no conceivable effect on a European site, because there is no link or pathway between them and the qualifying interests, or any effect would be a positive effect or would not otherwise undermine the conservation objectives for the site;

3d: Aspects which make provision for change but which could have no significant effect on a European site (minor residual effects), because any potential effects would be so restricted that they would not undermine the conservation objectives of the site;

3e: Aspects which are too general so that it is not known where, when or how the aspect of the plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected.

4.3 The screening for potential effects is split into two sections. The first deals with the policies in the Plan (Appendix 1) and the second with the proposed development sites within the Plan (Appendix 2).

Included within the screening process is reference to sites which are part of the Strategic Housing Investment Plan (SHIP) 2019/2020 – 2023/2024. These have been approved by the Council's Enterprise & Housing Committee.

4.4 It has not been possible to screen out the likelihood of a significant effect on European sites from the following proposals, or from the policies that they are promoted under. These policies and proposals have therefore been taken forward for appropriate assessment.

- NLCN0490A(1&2) Palacerigg & PROM LOC3
- NLCN0490B(1&2) Mid-Forest & PROM LOC3
- NLC00519 Proposed Energy Plant, Greengairs Road & PROM LOC 2
- 2C Visitor Economy Areas & Locations - PP 2C Purpose of Place Policy

4.5 It is not expected that there would be any in-combination effects as a result of the in-combination impacts of the elements screened out under 3d i.e. those which make provision for change but would have no significant effect.

5. Appropriate Assessment and Mitigation

5.1 Matters Requiring Assessment - Mid-Forest NLCN0490B(1&2)/Palacerigg NLCN0490A(1&2)

As a result of consultation on the *NLLDP Proposed Plan* (2017), NatureScot outlined that the following two sites within the South Cumbernauld Community Growth Area promoted by Policy LOC2 could have a likely significant effect on the Taiga Bean Geese qualifying interest of the Slamannan Plateau SPA due to the potential for increased disturbance:

- **NLCN0490A(1&2) South Cumbernauld CGA (Palacerigg) – approx. 1870m from the SPA**
- **NLCN0490B(1&2) South Cumbernauld CGA (Mid-Forest) – approx. 720m from the SPA**

Both sites have an indicative 600 units capacity within the *NLLDP*. Both sites can be seen on Map 2 in Appendix 3.

5.2 Slamannan Plateau SPA

Slamannan Plateau qualifies under Article 4.2 by regularly supporting nationally important numbers of migratory Taiga bean geese (*Anser fabalis fabalis*). Between winters 2000/2001 and 2004/05 the average peak number of geese at the site was 221, representing over 53% of the total number present in Great Britain.

The Conservation Objectives for the site are:

- To avoid deterioration of the habitats of the qualifying species or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and
- To ensure for the qualifying species that the following are maintained in the long term
 - Population of the species as a viable component of the site
 - Distribution of the species within site
 - Distribution and extent of habitats supporting the species;
 - Structure, function and supporting processes of habitats supporting the species.
 - No significant disturbance of the species

The bean goose feature of the site was last assessed to be in favourable condition (2016).

5.3 Scope of Assessment

Given that the proposed sites lie outside the SPA, it is considered that the proposed allocations would have no impact on maintenance of the following SPA conservation objectives and that no further consideration requires to be given to these in this assessment as these will be met:

- To ensure for the qualifying species that the following are maintained in the long term
 - Distribution and extent of habitats supporting the species;
 - Structure, function and supporting processes of habitats supporting the species.

Consideration is therefore given to impacts of the proposals on the following conservation objectives:

- To avoid deterioration of the habitats of the qualifying species or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and
- To ensure for the qualifying species that the following are maintained in the long term
 - Population of the species as a viable component of the site
 - Distribution of the species within site
 - No significant disturbance of the species

Mid-Forest is subject to an as yet unimplemented planning permission in principle for a masterplan comprising residential development with local retail/services and ancillary works including access roads, SUDs and landscaping (16/00689/PPP), approved in August 2019. As part of the consideration of the planning application, an Appropriate Assessment was undertaken. Given that both Mid-Forest and Palacerigg present similar issues in respect of the SPA, the Appropriate Assessment undertaken for Mid-Forest has been amended to address both sites.

The assessment is based on the information contained in the Masterplan for major residential development Land within the South Cumbernauld Community Growth Area Forest Road, Cumbernauld Environmental

Statement (Anderson, Bell & Christie, June 2016) and NatureScot's response to planning consultation 16/00689/PPP dated 2 December 2016.

5.4 **Assessment against the Conservation Objectives for the Slamannan Plateau SPA**

The primary conservation objective to consider in this case is to avoid significant disturbance of the bean geese. If there is significant disturbance it may negatively affect the conservation objective to maintain the distribution of the species within the site, with the potential to then impact on the conservation objective to maintain the population of the species as a viable component of the site.

Mid-Forest

In the Recreation Management Plan produced for the Mid-Forest proposal (June 2016 ES T.09 Recreational Management Plan) it is estimated that following completion of the development there will be an approximate 8.6% increase in the number of households currently taking recreational walks of up to 30 minutes and also one hour in the local area. This increase in recreational walks will be managed through the design solutions proposed within the Recreation Management Plan. Residents will be diverted away from the Slamannan Plateau and connections with Palacerigg Country Park will be promoted in addition to the provision of attractive local circular routes. These solutions are contrasted against the less attractive option for walkers to access Fannyside Road via Forest Wood and then walk along the road (already a Core Path) for 2km to reach Fannyside Lochs and then walk back along the road again.

Bean geese use the Slamannan Plateau between the months of October and February, which is a time of the year when visits to the outdoors are at the lowest (Recreation Management Plan Table 5: Increased number of visitors anticipated as a result of CGA development during bean geese residence). Bean geese tend to feed and loaf across farmland mostly to the south and east of Fannyside Lochs during daylight hours. They tend to return to roost at the Fannyside Lochs after dusk and leave before dawn. Bean geese are therefore unlikely to be using the area around the Fannyside Lochs during the day time, which is when most people would be visiting the outdoors.

Therefore, given the seasonal and daily variation in the use of the Slamannan Plateau by bean geese considered against the likely low level increase in the number of visitors to the Fannyside Lochs (and SPA) when the geese are in residence following completion of the development, **with**

the implementation of the design solutions presented within the Recreation Management Plan, it is concluded that bean geese will not be significantly disturbed by the completion and use of the Mid Forest site. The SPA's conservation objectives relating to maintaining the distribution of the species within the site and maintaining the population of the species as a viable component of the site will also be met.

Palacerigg

The Palacerigg site is situated further from the SPA than the Mid Forest site and is separated from the SPA by the Palacerigg Country Park. Therefore, despite the lack of any current masterplan for the Palacerigg site, the conclusions of the assessment within section 11.11 of the June 2016 Environmental Statement that any effects on bean geese arising from the Palacerigg proposal are unlikely to be any greater than those arising from the Mid Forest proposal are agreed with. It is therefore concluded that the appraisal above in relation to Mid-Forest is also applicable to the Palacerigg allocation.

In-combination effects

In view of the above assessment, it is concluded that, with mitigation, the in-combination effects of the Mid Forest site and the Palacerigg site will not have an adverse effect on the integrity of the Slamannan Plateau SPA.

5.5 **Conclusion**

It is concluded that, with the adoption of mitigation measures, **specifically any necessary design solutions presented within a Recreation Management Plan**, the Mid Forest and Palacerigg proposals would have no adverse effect on the integrity of the Slamannan Plateau SPA either on their own, or in combination. All Conservation Objectives will be met.

5.6 **South Cumbernauld Community Growth Area Strategic Development Framework (SDF) 2016**

The SDF has the status of supplementary planning guidance. The Mid-Forest and Palacerigg sites are part of the area covered by the SDF.

The SDF outlines that any applications in principle, masterplans and/or detailed applications for the South Cumbernauld CGA must be accompanied by a recreational management plan which examines any

likely increased pressures from recreational access to the Slamannan Plateau SPA as a consequence of the development. Where necessary, avoidance or mitigation measures should be provided. There must be certainty that the recreational management plan will avoid an adverse effect on the integrity of the Slamannan Plateau before any consent can be granted.

5.7 Amendments to Plan Required

To reflect the findings of this appropriate assessment, the following amendments to the North Lanarkshire Local Development Plan – Modified Proposed Plan are required:

The following caveats be inserted into the Plan within the Area Strategy for Cumbernauld & Kilsyth:

1. Under Existing housing development sites (p. 115 of the Plan):

- An asterisk * be added to the end of the allocations NLCNO490A Cumbernauld CGA (Palacerigg) & NLCNO490B Cumbernauld CGA (Mid-Forrest)
- A footnote be inserted at the bottom of the page to read:

**Any development proposals must take Policy PROT A Category A1 into account and, to be in accordance with the Plan, comply with the requirements of the South Cumbernauld Community Growth Area Strategic Development Framework.*

2. For consistency, the wording in relation to the SPA on page 117 of the Plan should also be amended to read:

Any development proposals must take Policy PROT A Category A1 into account and, to be in accordance with the Plan, comply with the requirements of the South Cumbernauld Community Growth Area Strategic Development Framework.

5.8 Matters Requiring Assessment – Greengairs Road (NLC00519)

During the development management process, the Greenhills Energy Plant, Greengairs Road (NLC00519), promoted under Policy PROM LOC 2 was identified as having a likely significant effect on the Slamannan

Plateau SPA due to the predicted levels of acid deposition resulting from emissions from the proposed plant. While now approved, the planning permission for the development remains unimplemented.

5.9 Slamannan Plateau SPA

Slamannan Plateau qualifies under Article 4.2 by regularly supporting nationally important numbers of migratory Taiga bean geese (*Anser fabalis fabalis*). Between winters 2000/2001 and 2004/05 the average peak number of geese at the site was 221, representing over 53% of the total number present in Great Britain.

The Conservation Objectives for the site are:

- To avoid deterioration of the habitats of the qualifying species or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and
- To ensure for the qualifying species that the following are maintained in the long term
 - Population of the species as a viable component of the site
 - Distribution of the species within site
 - Distribution and extent of habitats supporting the species;
 - Structure, function and supporting processes of habitats supporting the species.
 - No significant disturbance of the species

The bean goose feature of the site was last assessed to be in favourable condition (2016).

5.10 Scope of Assessment

Given that the development site lies 3,800 m from the SPA, it is considered that the proposed development would have no impact on the following SPA conservation objectives and that no further consideration requires to be given to these in this assessment as these will be met:

- To ensure for the qualifying species that the following are maintained in the long term
 - No significant disturbance of the species

Post-construction operation of the permitted Greenhills facility has been assessed as exceeding the screening thresholds for acid deposition (process contribution > 1% and the predicted environmental concentration

> 100% of the relevant critical load) at the Slamannan Plateau SPA. This leads to a conclusion of likely significant effect and the requirement for a more detailed appropriate assessment to be undertaken.

Direct impacts on taiga bean geese: There are few, if any, instances of direct effects on bird species from acid deposition. Impact on the habitat on which the bird species depends for feeding or roosting is assessed as an indirect effect on the bird population. The taiga bean goose is found in two broad habitats at Slamannan Plateau: feeding on improved grassland and roosting on Fannyside Lochs and the surrounding bog habitats (Maciver, 2008; BCM Environmental Services Limited, 2011). Improved grassland is not considered to be sensitive to acidification or eutrophication.

Indirect impacts on taiga bean geese: Raised and blanket bogs are vulnerable to the effects of acidification due to a lack of buffering capacity in nutrient-limited, water-logged, acidic, organic peat soils. This may lead to a decrease in soil pH, i.e. soils can become more acidic, affecting soil nutrient balance and organic matter breakdown. Leaching of plant nutrients, especially base cations (magnesium, potassium, calcium) can affect plant growth, leading to the displacement of some sensitive plant species. The increased toxic metals concentration in the soil water can lead to detrimental effects on plant root systems and soil organisms, (especially decomposers) and may have a direct effect on lower plants including bryophytes and lichens. Released aluminium binds to phosphorus making it less accessible to plants, which is then aggravated by lower decomposition rates in acidified soils. Therefore, increased acid deposition could lead to damage to the bog habitats, if at a sufficient level to cause these changes. The magnitude and extent of impacts on the bog habitats required to have a discernible effect on the taiga bean geese population is not well understood.

For these reasons, assessment of the proposal against the following Conservation Objectives is therefore required:

- To avoid deterioration of the habitats of the qualifying species or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and
- To ensure for the qualifying species that the following are maintained in the long term
 - Population of the species as a viable component of the site
 - Distribution of the species within site
 - Distribution and extent of habitats supporting the species;

- Structure, function and supporting processes of habitats supporting the species.

The assessment is based on the information contained in the *Record of the assessment of the conservation implications of the operation of Green Hills CHP Facility, Airdrie* produced by SEPA in relation to Pollution prevention & Control permit application PPC/A/1104094, dated February 2013.

5.11 Assessment against the Conservation Objectives for the Slamannan Plateau SPA

The primary conservation objectives to consider in this case is to maintain the distribution and extent of habitats supporting the species and the structure, function and supporting processes of habitats supporting the species. Negative impacts on these objectives could have consequential negative effects on the population of the species as a viable component of the site and the distribution of the species within site.

The approach adopted in the assessment of the PPC application was to assess whether the degree of acid deposition and specifically the contribution from Greenhills CHP is likely to cause deterioration of the bog habitats, based on the extent to which the acid critical load was being exceeded. This assessment was a direct test of whether the habitat was likely to deteriorate as a result of the emissions from Greenhills CHP and other sources of acidifying substances, as the acid critical load is a measure of the degree of acidification above which acidification impacts may begin to be found.

The potential impacts of acid deposition encompass deterioration of the bog habitat and changes to structure, function and processes within bog habitats. Therefore, the assessment sought to address whether the additional load due to emissions from Greenhills CHP would be large enough to have a significant effect on the habitats.

Modelling results

Deposition modelling predicted a maximum process contribution of 1.25% of the acid deposition critical load, corresponding to 0.0075 keq ha⁻¹ yr⁻¹, at Slamannan Plateau SPA due to the Greenhills CHP facility. The maximum modelled acid deposition results were for two model grid points along the south west boundary of the site, affecting a small area of bog habitat south of Fannyside Muir.

The background deposition rate at the time of assessment was 1.21 keq ha⁻¹ yr⁻¹, 199% of the critical load; Predicted Environmental Concentration (background + PC) was 201% of the acid deposition critical load at Slamannan Plateau SPA.

The deposition of both S and N contribute to the acidification process and therefore the Critical Load for acidification is a function of the two. It is important to identify the main contributors to acidification and undertake a relevant source attribution for the deposition of S and N compounds. Where the Critical Load is exceeded due to N deposition (both oxidised and reduced) then this is usually derived from sources that are outside of SEPA's regulatory control. Examining the critical load function for Slamannan Plateau (in APIS) showed that complete removal of the Greenhills CHP sulphur deposition, or even all of the sulphur emission from all sources, would not bring the acidification of the background deposition below the lower acidity exceedance boundaries, as the acidification was being driven by nitrogen, largely from livestock and transboundary sources.

Long-term trend affecting background deposition:

Emissions of primary pollutants contributing to transboundary air pollution have declined substantially during the last 30 years, mainly in response to international control measures such as the UNECE Convention on Long-range Transboundary Air Pollution (CLRTAP), and the EU National Emission Ceilings Directive (NECD). Regional emissions of SO₂ and NO_x are expected to continue to reduce significantly following Europe-wide industrial compliance with the requirements of the Large Combustion Plant Directive and Limitation of Sulphur in Liquid Fuels Directive. Background acid deposition forecast for 2020 at Slamannan Plateau is 0.97 keq ha⁻¹ yr⁻¹, still in exceedance of the critical load for nitrogen but with reductions in both nitrogen and sulphur components, with the total reduction equivalent to an order of magnitude greater than the predicted process contribution to acid deposition from Greenhills CHP facility.

Additional localised information:

Site Condition Monitoring from 2016 indicates that the taiga bean goose feature is in favourable condition.

SEPA conducted regular water chemistry monitoring at the River Avon, downstream of Slamannan, from 1980 until 2007. This data could provide a potential signal of soil acidification in the area, as indicated by water

acidification. Mean pH showed a gently increasing trend from pH 7.2 to 7.7, indicating that acidification was not a significant pressure in the area drained by this watercourse.

Assessment outcome

The low absolute amount that emissions from the Greenhills CHP were predicted to add to the acid deposition at Slamannan Plateau was unlikely to lead to significant changes in the structure, function and processes of the bog habitat.

The acidity critical load was significantly exceeded, based on background deposition data from 2006 – 2008. However, the water chemistry data from downstream of Slamannan did not show evidence of acidification affecting soils locally. The critical load is set so that if deposition is below the critical load in the long-term steady state situation there will be no known detrimental effect; it employs a strict precautionary principle approach. It is not possible to validate critical load exceedances in the field unless the system is in steady-state conditions; under dynamic conditions the system may not actually be exceeded and adverse effects may not be observable.

The advice of APIS in respect of the sensitivity of the taiga bean goose to acidification was that there should be no expected negative impact on the species due to impacts on the species broad habitats

5.12 Conclusion

- The predicted increase in acid deposition due to emissions from the Greenhills CHP facility was low in absolute terms, by comparison with prevailing estimated deposition rates. This suggested a low potential for significant impact to the bog habitat.
- The effects of acid deposition on the taiga bean geese was assessed on the basis that, if the bog habitat is not deteriorating and the relevant habitat aspects are not affected then the emission from Greenhills CHP would not be having an indirect effect on the taiga bean geese for which the SPA was classified.
- It was likely that background rates will have declined by the time the facility is operational, to a greater extent than the small increases predicted from the facility, i.e. no overall increase in deposition would be received by the site, although the magnitude of the decrease would be reduced.

- There was no evidence in the available data or literature to indicate that the relevant designated sites are suffering as a consequence of atmospheric deposition from nearby sources.

It is therefore concluded that the permitted development, and Policy LOC2, would have no adverse effect on the integrity of the Slamannan Plateau SPA, as the Conservation Objectives for the site will be met.

5.13 In-combination effects

In view of the above assessment, and the conclusion of the appropriate assessment of the Mid Forest and Palacerigg proposals, it is concluded that the Greenhills development will not result in any in-combination effects which have an adverse effect on the integrity of the Slamannan Plateau SPA.

5.14 Amendments to Plan Required

None.

5.15 Matters Requiring Assessment – PP 2C Purpose of Place Policy

Policy PP 2C supports the provision of tourism and leisure facilities in the Visitor Economy Locations. The Policy identifies specific locations including Palacerigg Country Park. The boundary of the Park partially overlaps with the Slamannan Plateau Special Protection Area (SPA) and is immediately adjacent to the West Fannyside Moss Special Area of Conservation (SAC).

As a result of consultation on the NLLDP Modified Proposed Plan 2018, NatureScot identified that PP 2C Purpose of Place Policy has the possibility, depending on how it is implemented, to have a significant effect on the Slamannan Plateau SPA or West Fannyside Moss SAC.

5.16 Slamannan Plateau SPA

Slamannan Plateau qualifies under Article 4.2 by regularly supporting nationally important numbers of migratory Taiga bean geese (*Anser fabalis fabalis*). Between winters 2000/2001 and 2004/05 the average peak number of geese at the site was 221, representing over 53% of the total number present in Great Britain.

The Conservation Objectives for the site are:

- To avoid deterioration of the habitats of the qualifying species or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and
- To ensure for the qualifying species that the following are maintained in the long term
 - Population of the species as a viable component of the site
 - Distribution of the species within site
 - Distribution and extent of habitats supporting the species
 - Structure, function and supporting processes of habitats supporting the species.
 - No significant disturbance of the species

The bean goose feature of the site was last assessed to be in favourable condition (2016).

5.17 West Fannyside Moss SAC

The Qualifying Interest for which the site is designated is a blanket bog.

The Conservation Objectives for the site are:

- To ensure that the qualifying feature of West Fannyside Moss SAC is in favourable condition and makes an appropriate contribution to achieving favourable conservation status; and
- To ensure that the integrity of West Fannyside Moss SAC is maintained by meeting objectives 2a, 2b and 2c
 - 2a. Maintain the extent and distribution of the habitat within the site.
 - 2b. Maintain the structure, function and supporting processes of the habitat
 - 2c. Maintain the distribution and viability of typical species of the habitat

The blanket bog feature of the site was last assessed to be in favourable condition (2002).

5.18 Scope of Assessment

The effects of Policy PP 2C will depend on how it is implemented in due course, but could include:

- Loss or deterioration of habitat within the SPA and/or SAC.
- Disturbance to the SPA qualifying interests, with consequent changes to their distribution within the site.

However, as no specific effects can be predicted at this time, it is not possible to assess the policy against the specific Conservation Objectives of the SPA or SAC at this time.

5.19 Conclusion

It is necessary to ensure that implementing the policy in ways that would affect the integrity of the European sites would not be in accordance with the plan. A specific policy caveat which would remove the presumption in favour of the development if it was implemented in a way that could or would adversely affect site integrity is therefore required.

5.20 In-combination effects

In view of the above assessment with the inclusion of a Policy caveat, and the conclusion of the appropriate assessment of the Mid Forest, Palacerigg and Greenhills proposals, it is concluded that the Policy will not result in any in-combination effects which have an adverse effect on the integrity of the Slamannan Plateau SPA.

5.21 Amendments to Plan Required

To reflect the findings of this appropriate assessment, the following amendments to the North Lanarkshire Local Development Plan – Modified Proposed Plan are required at Adoption stage:

The following caveat will be inserted into the Plan, under PP 2C Purpose of Place Policy, in the right-hand column following text prior to the last sentence (“All proposed development...in the Plan”):

“With regard to any proposed development at Palacerigg Country Park, planning permission will only be granted if there would be no adverse

effect on the integrity of the Slamannan Plateau SPA or West Fannyside Moss SAC, either alone or in combination with other plans or projects”.

The submission of a detailed project-level HRA at the development management stage will be required to demonstrate no adverse impact on site integrity should any site specific projects/proposals come forward.

6. Summary of HRA conclusions

- 6.1 The policies and proposals included within the Plan have undergone screening for likely significant effects on European Sites. Where it has not been possible to discount the possibility of likely significant effects from policies or proposals, appropriate assessment has been undertaken.

Based on the findings of the appropriate assessment:

1. The following caveats will be inserted into the Plan within the Area Strategy for Cumbernauld & Kilsyth:

Under Existing housing development sites (p. 115 of the Plan):

- An asterisk * will be added to the end of the allocations NLCNO490A Cumbernauld CGA (Palacerigg) & NLCNO490B Cumbernauld CGA (Mid- Forrest)
- A footnote be inserted at the bottom of the page to read “**Any development proposals must take Policy PROT A Category A1 into account and, to be in accordance with the Plan, comply with the requirements of the South Cumbernauld Community Growth Area Strategic Development Framework.*”

For consistency, the wording in relation to the SPA on page 117 of the Plan will also be amended to read “*Any development proposals must take Policy PROT A Category A1 into account and, to be in accordance with the Plan, comply with the requirements of the South Cumbernauld Community Growth Area Strategic Development Framework.*”

2. The following caveat will be inserted into the Plan, under PP 2C Purpose of Place Policy, in the right-hand column following text prior to the last sentence (“All proposed development...in the Plan”):

“With regard to any proposed development at Palacerigg Country Park, planning permission will only be granted if there would be no adverse effect on the integrity of the Slamannan Plateau SPA and/or West Fannyside Moss SAC, either alone or in combination with other plans or projects”.

With the inclusion of the measures set out above within the Plan, it is therefore concluded that there will be no adverse effect on the integrity of any European Site from the implementation of the North Lanarkshire Local Development Plan.

Appendix 1 – Policy Screening

The following table records the screening of the North Lanarkshire Local Development Plan indicating where policies and proposals have been screened out of the HRA because they would have *no effect* or would not be likely to have a *significant effect* on a European Site.

Table 1 – Screening (Stage 5) Policies & Guidance of the North Lanarkshire Local Development Plan

Policy & Guidance	Step 1 General Policy Statements	Step 2 Projects referred to in, but not proposed by, the Plan	Step 3 No likely significant effects on any European Site	Commentary
Promoting Development Locations & Infrastructure				
PROM LOC1 <i>Regeneration Priorities</i>	✓			The Policy is a general policy statement in support of regeneration and sustainable growth. Any site specific priorities identified by the Plan are screened in Appendix 2.
PROM LOC2 <i>Business Development Sites</i>				The Policy is a general policy statement in support of regeneration and sustainable growth but also supports site specific allocations which could have a likely significant effect on the Slamannan Plateau SPA. Taken forward to appropriate assessment (see section 5 Appropriate Assessment and Mitigation).
PROM LOC3 <i>Housing Development Sites</i>				The Policy is a general policy statement in support of regeneration and sustainable growth but also supports site specific allocations which could have a likely significant effect on the Slamannan Plateau SPA. Taken forward to appropriate assessment (see section 5 Appropriate Assessment and Mitigation).
PROM LOC4 <i>Special Landscape Areas & Green Network Improvements</i>	✓		✓	The policy has aspects which seek to protect and enhance the natural environment, including biodiversity, or conserve or enhance the natural, built or historic environment.
PROM ID1 <i>Transport Improvements</i>		✓		General policy statements which supports other infrastructure strategies ranging from National to Council level.
PROM ID2 <i>Utilities Improvements</i>	✓		✓	General policy statement supporting utilities development in principle subject to other criteria, includes protection of European sites.
Protecting Assets				
PROT A <i>Natural Environment & Green Network Assets</i>			✓	This policy protects assets (SPAs and SACs directly) and is designed to rigorously protect a range of natural, physical and cultural assets and will have a positive effect on the natural environment.
PROT B <i>Historic Environment Assets</i>			✓	The policy protects historic environment assets and will have a positive effect on the historic environment.
PROT C <i>Mineral Resources</i>	✓			This policy protects mineral resources and where applications for extraction are proposed it seeks to ensure no adverse impact on the natural environment. Effects on any particular European site cannot be identified because the policy is too general.
Strategic Town Centres				
PP 1A <i>Purpose of Place Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected.
AD 1A <i>Amount of</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of

<i>Development Policy</i>				the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. The policy can only be applied upon a specific proposal coming forward.
1B Other Town Centres				
<i>PP 1B Purpose of Place Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected.
<i>AD 1B Amount of Development Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. The policy can only be applied upon a specific proposal coming forward.
1B Local Centres				
<i>PP 1C Purpose of Place Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected.
<i>AD 1C Amount of Development Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. The policy can only be applied upon a specific proposal coming forward.
2A Strategic Business Centres				
<i>PP 2A Purpose of Place Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected.
<i>AD 2A Amount of Development Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. The policy can only be applied upon a specific proposal coming forward.
2B Local Business Centres				
<i>PP 2B Purpose of Place Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected.
<i>AD 2B Amount of Development Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. The policy can only be applied upon a specific proposal coming forward.
2C Visitor Economy Areas & Locations				
<i>PP 2C Purpose of Place Policy</i>				The Policy is a policy statement in support of tourism and leisure provision at site specific locations which could have a likely significant effect on the Slamannan Plateau SPA or West Fannyside Moss SAC, depending on how it is implemented. Taken forward to Appropriate Assessment which concluded with an amendment to the Plan (see section 5 Appropriate Assessment and Mitigation).
<i>AD 2C Amount of Development Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. The policy can only be applied upon a specific proposal coming forward.
3 General Urban Area				
<i>PP 3 Purpose of Place</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of

<i>Policy</i>				the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected.
AD 3 <i>Amount of Development Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. The policy can only be applied upon a specific proposal coming forward.
4 Green Belt				
PP 4 <i>Purpose of Place Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. Makes provision for change only in terms of suitable green belt uses, however also provides protection to natural assets.
AD 4 <i>Amount of Development Policy</i>	✓		✓	Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. The policy can only be applied upon a specific proposal coming forward.
5 Countryside				
PP 5 <i>Purpose of Place Policy</i>	✓			Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. Makes provision for limited change and seeks to protect the countryside.
AD 5 <i>Amount of Development Policy</i>	✓		✓	Aspects which are too general so that it is not known where, when or how the aspect of the Plan may be implemented, or where any potential effects may occur, or which European sites, if any, may be affected. The policy can only be applied upon a specific proposal coming forward.
Contributions to Infrastructure				
Policy CI <i>Contributions to Infrastructure</i>	✓			General policy statement regarding contributions to infrastructure for new development.
Environmental & Design Qualities				
EDQ 1 <i>Policy Site Appraisal</i>	✓			Concerns the appraisal of any proposed development. Assessment policy for which no specific sites are identified.
EDQ 2 <i>Policy Specific Features for Consideration</i>	✓			Addresses development considerations for proposals within hazardous zones, utilities infrastructure and management areas.
EDQ 3 <i>Policy Quality of Development</i>	✓			Assessment policy for which no specific sites are identified. Also provides protection for assets.

NLMW1237	Land east of Hannah Park (Shotts BA FC)		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. Planning Permission in Principle. SHIP site.
NLMW1261	Springfield Farm			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.
NLMW1281	Former Post Office, Shottskirk Road			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.
Wishaw					
NLMW0143A	Old Manse Road - Phase A			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.
NLMW0628	South of Dimsdale Road		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. SHIP site.
NLMW0761	Land at 391-395 Caledonian Road		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. SHIP site.
NLMW1021	Millbank Road (17-19)			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.
NLMW1027A	Gowkthrapple (Castlehill 2)		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. SHIP site
NLMW1088	Site of Former Waterloo Primary School		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. SHIP site

NLMW1116	322 Main Street			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. Planning Permission lapsed.
NLMW1178	Excelsior Street			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.
NLMW1179	Castlehill Farm			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. Planning Permission in Principle.
NLMW1181	Netherton Road (South)			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.
NLMW1182	Netherton Street (North)			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.
NLMW1183	Land at Priory Lodge (Gowkthrapple)			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.
NLMW1229	Site of Former Belhaven House		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. SHIP site
NLMW1250	Overtown Road Waterloo			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.
NLMW1266	Burnhall Place/Mossburn Street		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. SHIP site.
NLMW1273	Site of Former Wishaw Market (East Academy Street)		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. SHIP site.
NLMW1274	Wishaw & District HA Office (Kirk Road)		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. SHIP site.
NLMW1294	Alexander Street		✓	✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs. SHIP site.

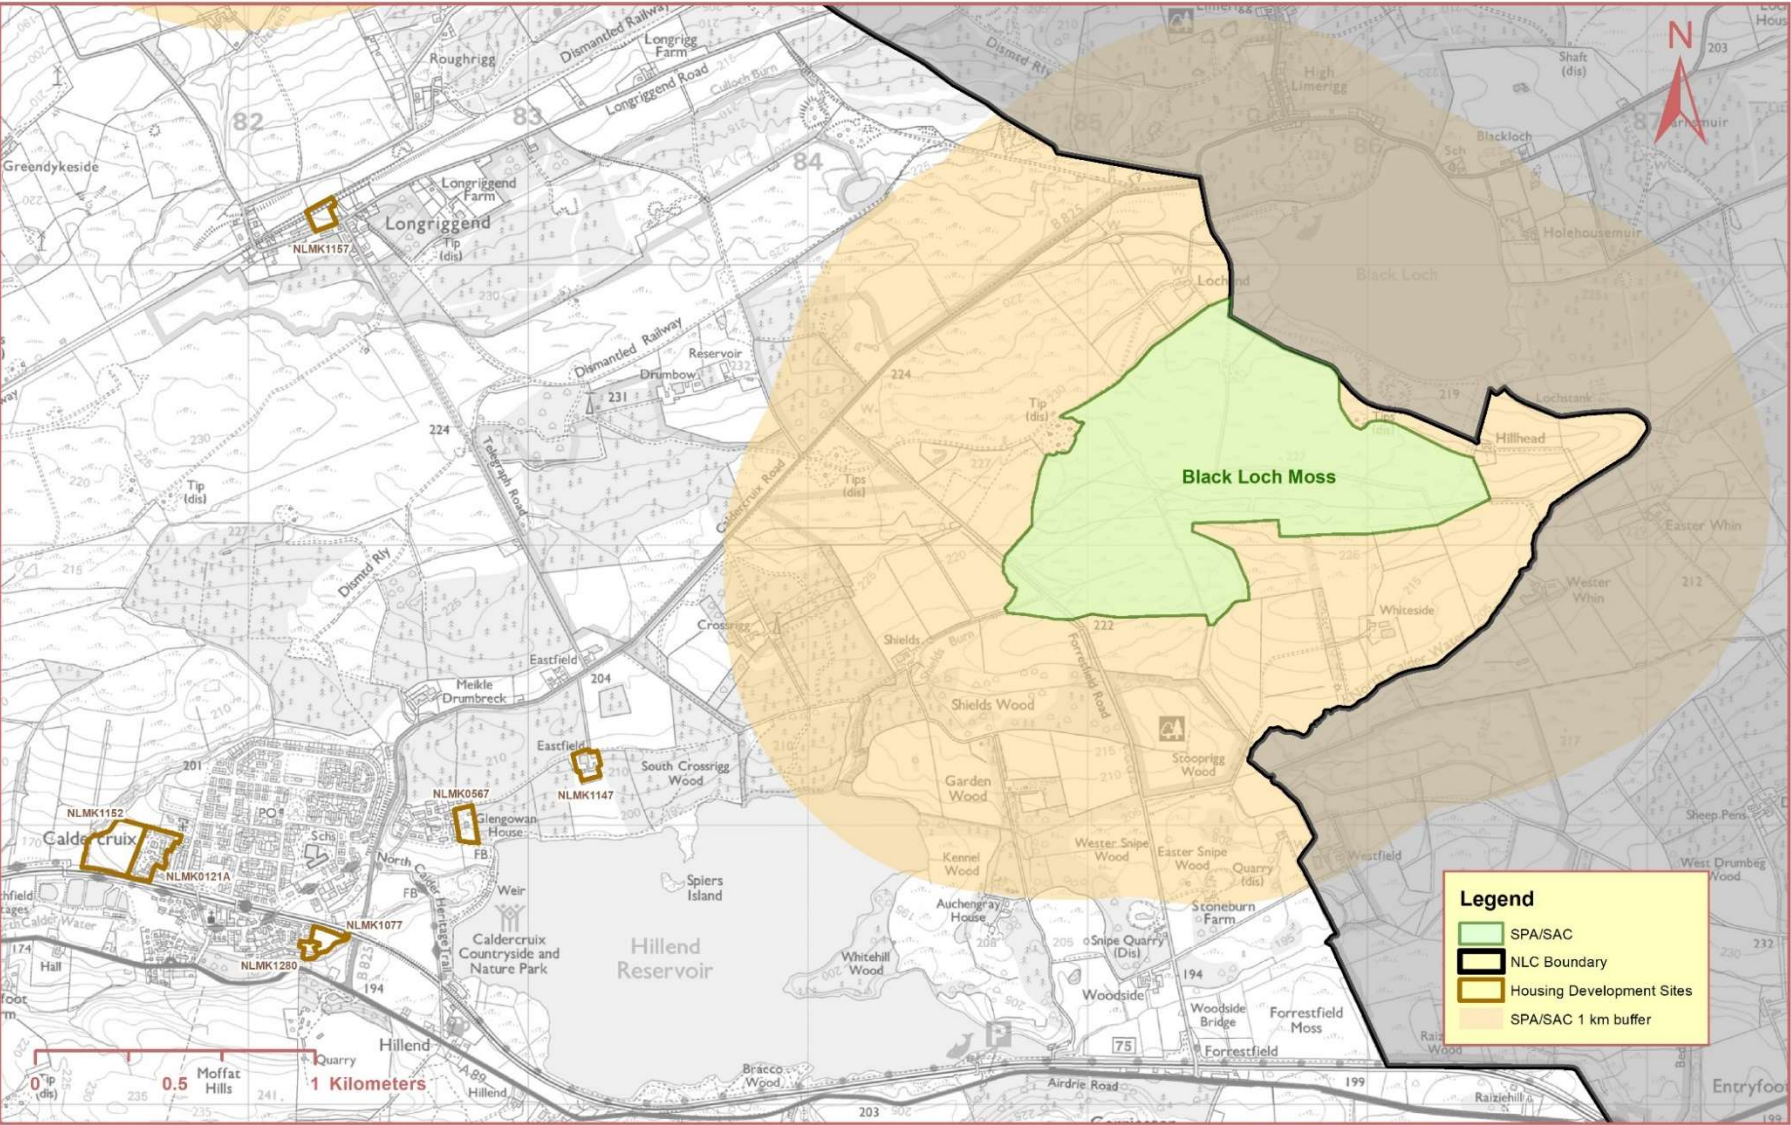

Regeneration Development Site					
07/19	Morningside Road Newmains			✓	Makes provision for change but would have no conceivable effect. No link or pathway between the proposal and the qualifying interests of the SPA or SACs.

Appendix 4 - Information about the European Sites

INFORMATION ABOUT THE EUROPEAN SITES POTENTIALLY AFFECTED						
Site name	Slamannan Plateau	Black Loch Moss	North Shotts	Clyde Valley Woods	West Fannyside Moss	Blawhorn Moss
Designation status	SPA	SAC	SAC	SAC	SAC	SAC
Date of designation	Designated 09/10/08	Designated 17/03/05	Designated 17/03/05	Designated 17/03/05	Designated 17/03/05	Designated 17/03/05
Qualifying interests	Taiga bean goose (Anser fabalis fabalis)	Active raised bogs Degraded raised bog	Active raised bogs Degraded raised bogs	Mixed woodland on base-rich soils associated with rocky slopes	Blanket bog	Active raised bogs Degraded raised bog
Conservation objectives	<p>To avoid deterioration of the habitats of the qualifying species (listed below) or significant disturbance to the qualifying species, thus ensuring that the integrity of the site is maintained; and</p> <p>To ensure for the qualifying species that the following are maintained in the long term:</p> <p>Population of the species as a viable component of the site Distribution of the species within site Distribution and extent of habitats supporting the species Structure, function and supporting processes of habitats supporting the species No significant disturbance of the species</p>	<p>To avoid deterioration of the qualifying habitats (listed below) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and</p> <p>To ensure for the qualifying habitats that the following are maintained in the long term:</p> <p>Extent of the habitat on site Distribution of the habitat within site Structure and function of the habitat Processes supporting the habitat Distribution of typical species of the habitat Viability of typical species as components of the habitat No significant disturbance of typical species of the habitat</p>	<p>To avoid deterioration of the qualifying habitats (listed below) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and</p> <p>To ensure for the qualifying habitats that the following are maintained in the long term:</p> <p>Extent of the habitat on site Distribution of the habitat within site Structure and function of the habitat Processes supporting the habitat Distribution of typical species of the habitat Viability of typical species as components of the habitat No significant disturbance of typical species of the habitat</p>	<p>To avoid deterioration of the qualifying habitat (listed below) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and</p> <p>To ensure for the qualifying habitat that the following are maintained in the long term:</p> <p>Extent of the habitat on site Distribution of the habitat within site Structure and function of the habitat Processes supporting the habitat Distribution of typical species of the habitat Viability of typical species as components of the habitat No significant disturbance of typical species of the habitat</p>	<p>To ensure that the qualifying feature of West Fannyside Moss SAC is in favourable condition and makes an appropriate contribution to achieving favourable conservation status; and</p> <p>To ensure that the integrity of West Fannyside Moss SAC is maintained by meeting objectives 2a, 2b and 2c</p> <p>2a. Maintain the extent and distribution of the habitat within the site. 2b. Maintain the structure, function and supporting processes of the habitat 2c. Maintain the distribution and viability of typical species of the habitat</p>	<p>To avoid deterioration of the qualifying habitats (listed below) thus ensuring that the integrity of the site is maintained and the site makes an appropriate contribution to achieving favourable conservation status for each of the qualifying features; and</p> <p>To ensure for the qualifying habitats that the following are maintained in the long term:</p> <p>Extent of the habitat on site Distribution of the habitat within site Structure and function of the habitat Processes supporting the habitat Distribution of typical species of the habitat Viability of typical species as components of the habitat No significant disturbance of typical species of the habitat</p>

Site condition	Favourable	Unfavourable (Active raised bogs) Unfavourable (Degraded raised bog)	Favourable (Active raised bogs) Unfavourable (Degraded raised bogs)	Favourable	Favourable	Unfavourable (Active raised bogs) Unfavourable (Degraded raised bog)
Factors currently influencing the site		Over grazing. Management measures are in place that should, in time, improve the feature to Favourable condition (Unfavourable Recovering Due to Management)	Dumping/storage of materials. Management measures are in place that should, in time, improve the feature to Favourable condition (Unfavourable Recovering Due to Management)	Invasive species		Burning Invasive species
Vulnerabilities to change / potential effects of the plan	Possible increased human disturbance from nearby developments (RMP in place) Possible impact from energy proposal and its generated emissions				Possible increased human disturbance from nearby developments (RMP in place) Possible impact from energy proposal and its generated emissions
